Education

University of Toronto

Sep 2024 - Present

Computer Science Internship Program & Statistics (GPA: 3.94 / 4.00)

Toronto, ON

- **Relevant Coursework:** Software Design, Data Structures, Machine Learning, Database Design, Systems Programming, Design of Interactive Computational Media, Methods of Data Analysis

Experience

KITE Research Institute, UHN

Apr 2026 – Aug 2026

Research Assistant

Toronto, ON

- Contributed to research on neurological disorders by performing **literature analysis** and structuring datasets.
- Cleaned, transformed, and harmonized heterogeneous datasets to enable consistent **data analysis**.
- Supported **statistical analysis** and **machine learning** workflows on structured data, generating insights into factors associated with brain health outcomes.

University of Toronto

Dec 2025 – Present

Teaching Assistant

Mississauga, ON

- Conducted tutorials for **40 students**, explaining quiz questions and live **data analysis coding demos** using R.
- Assisted with course project development, including data collection and debugging R analysis code.

Beijing Century ChaoXing Information Technology Development Co., Ltd.

Jul 2025 – Dec 2025

AI Agent Developer

Remote

- Developed low-code AI agent workflows using platforms such as **Coze**, designing prompts, tool-calling logic, and user interaction flows for smart-course applications. Optimized agent orchestration with **LangChain/LangGraph**, improving workflow routing, context engineering, memory design, and citation-grounded responses for education-focused consultation systems.
- Scraped, cleaned instructor materials and official website information with **Python (pandas, NumPy)**.

East China Normal University

Jun 2022 – Sep 2022

Student Research Assistant

Shanghai, China

- Designed a **Raspberry Pi**-based access control system with **face recognition** and **voice recognition** using **Python**; tested with **100+ users**.

Projects

Survey-Based Artwork Classification Model | Python, pandas, NLTK, scikit-learn

- Developed a **machine learning model** to classify artworks from structured survey responses, including data cleaning, preprocessing, feature engineering, and model optimization and model evaluation.
- Built **Naive Bayes sub-models** to extract useful signals from open-text responses and integrated them with a tuned **Random Forest** classifier, achieving over **90% test accuracy**.

TMAP | HCI Research, Surveys, Experience Mapping, Interviewing, Empirical research, JavaScript, TypeScript

- Led a **HCI study** on campus-to-classroom wayfinding; synthesized **survey, observations, and interviews data** using **clustering algorithms** to pinpoint indoor-navigation breakdowns at UTSG. Translated **7 research findings** into measurable design requirements and evaluated TypeScript Prototype.

WFH Burnout Data Analysis | R, Regression Modeling, Data Visualization, ggplot2

- Built an R-based analysis of work-from-home burnout data with residual diagnostics, correlation heatmaps, influence analysis, and regression model selection, reaching **Adjusted $R^2 = 0.9365$** .

LexiGo | Java, Spring Boot, REST APIs, JUnit5, Mockito, Maven, Swing, SQL

- Designed a language-learning app for vocabulary study and practice, reach **15 stars** on GitHub. Built reusable word-practice modules, contributed **15,000+ lines** of Java code. Led project setup and maintenance, including build/CI configuration, resulting in **372 unit tests** and **82 merged pull requests** to ensure code quality.

Core Skills

Languages: Python, Java, C, C++, R, HTML5, CSS3, TypeScript, Assembly, SQL

Tools: Anaconda, LaTeX, Markdown, Linux, REST APIs, Git, GitLab, Docker
